

# Weekly Report

## 2/15/19

Christina Chen

# Tasks this week

I have written both the job submission file for hpc (slurm) and the python script that reads the proton file, extract proton events, then write out fitting results on a HDF5 file (argparse to the hpc destinations).

The implementation/execution of those files did not work:

Pytpc is not currently installed successfully because the hpcc has uploaded its system - need to work in Anaconda2's py3 environment

Also, the system is giving an ModuleNotFoundError for not being able to find a cleaning wrappers file - to be resolved
